

## PCA Southern Arizona Boxster and 996 Technical Session Scheduled for Saturday 18 September 2010

You may be asking yourself what is a PCA Technical Session. It is an informal gathering of PCA members to discuss and learn things not in the Porsche owner's manual about their cars. PCA members have a long tradition of being very knowledgeable about the unique mechanical parts and engineering designs that make their automobiles so unique. Who should attend? Anyone who owns one of these cars, someone who thinks he might want to own one, and anyone who has interest in knowing more about these fine sports cars. This Tech Session will be hosted by Dearing Automotive scheduled for Saturday, 18 September starting at 9 AM. Robert Dearing and his knowledgeable staff plan on discussing Boxster and 996 Intermediate Shaft, Rear Main Seal issues and solutions. Agenda will also include basic maintenance tips, window regulator tips, cooling maintenance and fluid change demonstration. Last but not least an explanation/demonstration of the computer diagnostics capabilities is a must see for every Porsche enthusiast. So bring all your mechanical and maintenance questions about your Boxster and 996 to this very unique show and tell session that will focus on these modern widely available and affordable Porsche's. This will also be a social event with a no-host lunch at Famous Dave's Barbeque at 4565 North Oracle Road. Meet at Dearing Automotive located at 330 E Fort Lowell Rd (Ft Lowell and Fontana/east of Stone Avenue) at 9 AM. Coffee and water will be provided during the Tech Session. The tech session will end around 11:30 AM. We will then meet for lunch at Famous Dave's. Please sign-up on the website to make a no-host lunch reservation.
